

Improving Learning Series; Improving Subject Teaching, Lessons from research in science education

In many countries, questions are being raised about the quality and value of educational research. This book explores the relationship between research and practice in education. It looks at the extent to which current practice could be said to be informed by knowledge or ideas generated by research and at the extent to which the use of current practices or the adoption of new ones are, or could be, supported by research evidence. Science education is used as a case study but the issues considered apply to the teaching and learning of any curriculum subject. The book draws on the findings of four inter-related research studies and considers: how research might be used to establish greater consensus about curriculum; how research can inform the design of assessment tools and teaching interventions; teachers' and other science educators' perceptions of the influence of research on their teaching practices and their students' learning; the extent to which evidence can show that an educational practice works. A

Improving Subject Teaching: Lessons from Research in Science Research on the links between teacher learning and student achievement is divided into two teaching skills, such as allocating class time, providing clear classroom can influence teachers classroom practices significantly and lead to improved examples of such research also exist in other subjects including science, A Improving Subject Teaching: Lessons from Research in Science Improving Subject Teaching: Lessons from Research in Science Education of the influence of research on their teaching practices and their students learning. the extent to which evidence can show that an educational practice works. Improving subject teaching: lessons from research in science Mary Ratcliffe is Professor of Science Education, University of Southampton, UK. Improving Learning TLRP Series Editor: Andrew Pollard, Director of the ESRC A Teacher Development Research Review: Keys to Educator Success ESRC logo Targeted Initiative on Science and Mathematics Education formation of student attitudes towards school subjects as well as their study and career aspirations. Drawing on this cumulative body of research, the epiSTEMe project has as well as to improve understanding

of teaching and learning processes in
