

Maths For Primary School Teachers: The Ideal Refresher to Explain Concepts with Confidence

You are training to be a primary school teacher but it has been a while since you did GCSE. Even then you weren't 100% confident about the subject and are worried about having to teach maths in front of young, inquiring minds. You also have a QTS test to pass which you're terrified of failing. To overcome these obstacles, I've created this book. It will guide you through the seeming complexities of mathematics and give you a deep understanding that you can pass on to your pupils, showing them that you are confident with maths, and so they can be too! It starts from the beginning, so assumes no knowledge - especially useful if you're returning to education in later life - but quickly and painlessly will guide you through the concepts that are so important for young children to understand and retain. You will learn: What multiplication actually is What shape you get when you multiply two numbers together The information you find about the shape What brackets really mean What division really is The three types of division How to actually do long division! How decimals work How to easily multiply and divide decimals How percentages work How to easily find percentages - even in your head Negative numbers Powers and how to explain them Standard form Advanced mental techniques to stretch more able students Puzzles All these are explained in plain English in a conversational tone, with no use of jargon, and from the point of view of a tutor with 15 years experience of all levels and types of learner. One of the joys of this

book and method is that it will give you your confidence and self-respect back and stop you believing that you are deficient in some way. This book promises to help you: Gain Confidence! Banish Your Fears! Help Others! Get Your Self-Respect Back! Enjoy.
