

# Electronics for Microwave Backhaul

Backhaul is an important area for today's microwave engineers to focus on with the continuous growth in the mobile device market and the essential function it has in the entire network infrastructure. This timely new resource presents an overview of the electronics of mobile network backhaul. Infrastructure planning, architecture evolution, digital controls, and countermeasures are all presented highlighting the building blocks of specific backhaul features. Tx and Rx design and antenna requirements are covered while examining the overall construction of the microwave radio hardware blocks. Single blocks are explored: the antenna, the analog transmitter and receiver, and the modem, recalling the most important aspects of transport networks and microwave link dimensioning.
